AMBIENTE

Stereophonic sound entails the accurate reproduction of independent left and right audio channels. In that respect, Solo has a secret weapon...the built-in ability to reproduce stereo sound when coupled with Como Audio's Ambiente wired speaker. Nudge Solo's rear switch over to "ST" and connect Ambiente's audio cable to Solo's Speaker output, and you're living large. From that point on, Ambiente will handle the right channel heavy lifting while Solo will dedicate itself to the left channel duties. Ambiente's 12' (3.6 meter) audio cable allows for plenty of separation between the two channels, providing a soundstage as fitting for a large orchestra as it is for an intimate Jazz trio or a soloist.

Once connected, Ambiente doubles Solo's maximum output power from 30 watts in Mono to 60 watts total in Stereo, resulting in 3dB more headroom. It also provides an improvement in bass. Solo was engineered to sound great on its own, but when partnered with Ambiente, they become a dynamic duo that will give both of your ears a pleasurable workout. Ambiente uses the same drivers and voicing as Solo, insuring consistent sound from one channel to the other.

Although Ambiente requires a wired connection to Solo, it gets all of its power from Solo's integrated Class D digital stereo amplifier. Thus, Ambiente does not require an external "brick" power supply or a power cord. Ambiente's single cable does it all.

Considering FM, DAB, Spotify, and most music is in two channel stereo, the Ambiente is an upgrade worthy of serious consideration.

Dimensions: 5.20" H (incl. feet) x 9.45" W x 5.12" D (incl. strain relief) / 132mm H (incl. feet) x 240mm W x 130 mm D (incl. relief strain)

Weight: 3.31 lbs/1.5 kg

Wood is quite literally a product of nature, and as such, has its own color and grain characteristics which can vary from tree to tree, often times greatly so. It is exactly these naturally occurring variations that result in each wood cabinet being truly unique. Therefore, variation must be expected between two wood cabinets of the same veneer. The piano white finish can also vary in shade. Note *the wood veneer can darken over time, particular when exposed to sunlight.*
