## **SPEAKEASY**

Founding CEO Tom DeVesto started Como Audio with the single goal of creating beautiful music systems that allow simple and easy access to the myriad of music content available to today's music enthusiast. SpeakEasy takes this simplicity to the next level with the Google Assistant built in.

Now, just by uttering "Okay, Google", followed by a command, you can play music, adjust the volume, control compatible devices (lighting, thermostats, etc.) around the home, set an alarm, and many other things. The two top mounted microphones will pick up your voice near or far, allowing for hands-free use. Link your existing Spotify, Pandora, iHeart Radio, and other compatible premium streaming accounts and access them all by voice control. The four Assistant LEDs mounted above the display flash to let you know when your Assistant is "thinking".

Although there are other Google Assistant products in the marketplace, SpeakEasy sets itself apart from the competition in several important ways. Chiefly is the crisp LED display which continually shows the time without you having to ask. Display icons indicate when the Alarm is set, when the Alarm is in Snooze mode, and when the Sleep timer is active. A front panel photocell sensor automatically adjusts the red backlight based on ambient light conditions.

Another important distinction is the ability to use an optional battery pack to make SpeakEasy portable. What good is an Assistant if you can't take him/her with you? A small red charging LED illuminates to let you know when the battery is charging. A 100-240V external adapter is included.

There's also Bluetooth 4.2 for wireless streaming, automatic, free software updates, the free Google Home app for iOS, Android, MAC, Windows, and Chromebook, a 5V/1A USB output to charge your smart phone, and actual front panel knobs when you prefer to do things the old-fashioned way and manually control volume, Play/Pause, Microphone mute, and Bluetooth. Add the optional, wired, dedicated right channel speaker for authentic, spacious, two channel stereo sound.

SpeakEasy is housed in a thick ½" MDF cabinet with a real walnut wood veneer or high gloss, multi-layered piano black or white finish. The top and front panels and knobs are anodized aluminum. Outside of the LED display and sensor, no plastic is used on the baffle. A ¾" reinforced polymer fiber soft dome tweeter, 3" custom, dual voice coil woofer, and custom DSP equalization result in great high-fidelity sound, reproducing your favorite music as it should be heard. The rear port made from rigid ABS plastic further enhances low bass frequencies while doubling as a convenient carry handle.

SpeakEasy will work with devices integrated with Google Chromecast for Audio as well as with Chromecast for Audio dongles. Whether you want music in one room only, in a few rooms, or throughout your entire home, SpeakEasy obliges.

Finding a good assistant these days isn't easy, but it is with SpeakEasy.

Finish: Real Walnut veneer, Piano Black, Piano White.

Dimensions: 9.53"/242 mm H x 4.96"/126 mm W x 5.20"/132mm D (including knobs and adapter strain relief)

Weight: 3.9lbs/1.77kg (4.4lbs/2kg with optional battery pack)
